The Conclusion of the Delian Quest

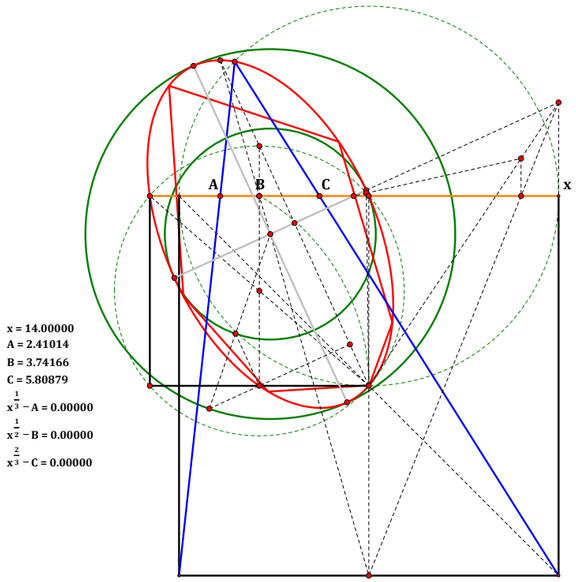
Friday, December 3, 2021

Normal people cannot see, as Plato said, the similar idea in the many examples. This is called pattern recognition and it requires the ability to comprehend metaphor.

In terms of the source of the Delian Problem and the source of the Judeo-Christian Scripture, one can see an identical message, the evolution of judgment of mankind. Where the JCS sets out many puzzles, all of which lead to the same conclusion, that mankind will not be able to read that book until after a certain time in human history, the Delian Problem set out one, however, that one, as in the JCS, is a universal expression of truth in regard to judgment: Do you comprehend that binary recursion produces the whole of judgment? Today, the computer is asking that same question, and once again, no one seems to be paying attention. Every possible system of grammar, and every possible system of manipulating things, is the results of binary recursion, just by the definition of a thing itself. For information processing, this gives us: Common Grammar, Arithmetic, Algebra and Geometry. Geometry, being the only analogic, produces metaphorical examples for each of the other three. This is our physically and biologically given method of performing all judgments.

In the perceptible, one can solve the particular Delian Problem, the duplication of the cube in at least two distinct ways. Many have tried to solve it with conics, with questionable results.

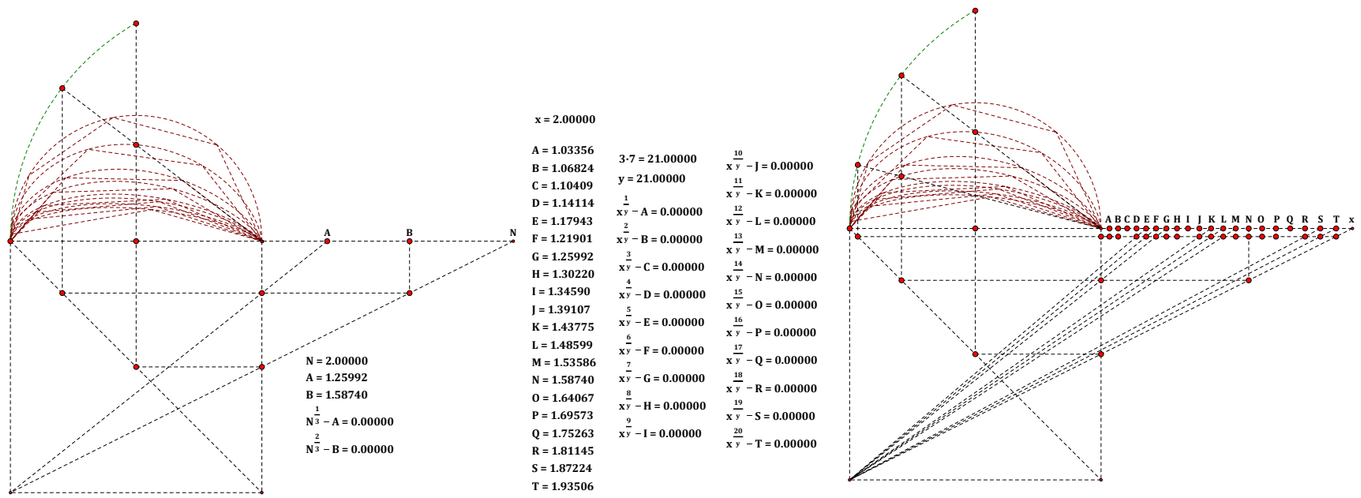
Here is the conic solution:



Fundamentally, it is a square root figure which gives you all the information required leaving only the loci to be drawn in, i.e. everything is given, if you have the wit to find it, and you either fill it in, or freeze up, afraid to take the next step.

Some have sought for a more expanded method of doing roots and powers altogether, but once again, no results.

Here, is any exponential series.



Power sequence for the loci, 2, 3, 5, 7, 11, 13, 17, 21

The mind is designed, by biological fact, to maintain and promote life through the manipulation of memory using binary recursion. Binary recursion means both parts of a thing, not only the relative, but the correlative as well. Therefore, when given a pair of tools, i.e. a binary set of tools, anyone with sight can see them perceptibly, however, to comprehend and use them, one has to see them intelligibly.

As both the JCS and the Delphic Oracle imply, Language is Universal and Intelligible, while Grammar is Particular and Perceptible. If one does not have the intelligence to comprehend the Universal Binary of Language, one cannot ever become literate. The ability to repeat symbols does not imply linguistic functionality, it is the ability to effect binary recursion with those symbols. And as each member of our Grammar Matrix, examples one of the four ways to utilize binary recursion, each must still arrive at the same results for any judgment, or result of binary recursion.

The literacy of man goes beyond the ability to solve a problem or two, one becomes literate, when judgment is applied to one's own behavior such that it complies with the definition of the mind as a life support system of the body. Our job, as given biologically, as given in the JCS, is to have dominion over the earth, the entire biosphere in order to maintain and promote life.
